

II. AMENDMENTS TO THE DRAWINGS

The Examiner states at page 3, paragraph 2 that the drawings of 10/4/04 are not approved because it is nuclear what changes have been made and that they do not overcome the objection set forth at page 3, paragraph 3 re: the substituted "figure shows modified forms of the drive means because it shows both the gear means 430, and the key/notch 420/425." and that these structures are mutually exclusive drive means.

The identical drawings for Fig. 6, as submitted on 10/4/04, are again submitted with direction respectfully provided by line and note. The Examiner will see in the "Replacement Sheet 10/4/04" the dashed line indicating that the motor is affixed between the two sets of plates with the shaft engaging only apertures (217) and (227).

Regarding the matter of notch v. gear, your applicant respectfully submits that matter of the motor (400) being immovably affixed to one plate (215) and either notch/key or gear related to a second plate (220) will be obvious to one of ordinary skill. Your applicant is agreeable to submitting an additional drawing as Fig. 6A showing the gear removed but respectfully submits that such will require the additional drafting time in amendment of the specification. Your applicant submits that those of ordinary skill will appreciate the drawings as illustrating options.

Your applicant respectfully requests the Examiner to accept Fig. 6 as amended and as submitted in the prior paper and to withdraw the objection and allow the application to be prosecuted on the merits. Your applicant observes that the Examiner states at page 4 that "If changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance." Your applicant is uncertain of the meaning of these statements and requests the Examiner to consider the requests of the applicant and to advise if additional changes are required.
